Background

For a competitive and environmentally friendly agriculture, the enhancement of plant defence mechanisms by elicitor treatments seems a promising strategy. **Elicitra, the French network on elicitors, aims at understanding, developing and promoting this strategy for all crops.**

Objectives and expected results

Partnership

The network partnership includes:

- **Research:** CNRS, INRA and IBP
- **Applied research organisations:** ARVALIS, Vegenov, Astredhor, IFV, CTIFL, ITEIPMAI and CETIOM
- **Universities and agricultural colleges:** Polytechnical institute La Salle Beauvais, URCA, ULCO, ISA, Avize High School, horticultural highschool network, ENITAB and INHP
- **Regional experimental stations:** CATE, CIVC, Invenio and Planète Légumes
- **Chambers of agriculture**
- **Competitive clusters:** IAR, Végépolys,...

A network dedicated to the main crop sectors:

- Main field crops including cereals, potatoes and oilseed rape
- Grapevine and wine
- Fruits and vegetables
- Ornamental plants and herbs (garden, medicinal and aromatic)
